ZEISS i.Terminal go

ZEISS i.Terminal go

Seeing beyond

ZEISS i.Terminal go is a software application for iPad® tablet which extends the ZEISS range of centration solutions. Intuitive and easy to use, ZEISS i.Terminal go represents the entry-level solution in the ZEISS centration product family. The software generates centration results via the iPad® tablet just in a few clicks. The application works without any additional hardware apart from the ZEISS calibration tool, allowing the user a high level of flexibility. Furthermore, ZEISS i.Terminal go supports business differentiation by offering a new digital patient experience.

Description of features:

Fast and Easy Image Taking

ZEISS i.Terminal go supports automatic adjustment for patient's head rotation that usually occurs during the measurement process. This supports higher precision in the measurement. The additional "lens type" function automatically takes into consideration the height centration following assigned centration rules.

Efficient and smooth workflow

In addition to fast and easy image taking, the following features allow for an efficient and smooth workflow: On the lens adjustment screen, lens stamps figures and reference points are shown directly, with the display of the patient's image in the background. The near and far reference points can be manually adjusted – according to the patient's personal vision preferences and the optician's evaluation.

High accuracy in centration

ZEISS i.Terminal go supports automatic adjustment for patient's head rotation that usually occurs during the measurement process. This supports higher precision in the measurement. The additional "lens type" function automatically takes into consideration the height centration following assigned centration rules.

Convenient finalization of the centration process

For the optician's convenience, the generated centration parameters are summarized in a report. This report can be printed or sent via the Apple® AirDrop® function, by email or using other applications available on the iPad® tablet. The report can also be used as a reference document for the edging, cutting and fitting process.

To place the final lens order, the optician can transfer all centration parameters digitally to the ordering system **ZEISS VISUSTORE**
